</table>
Characteristics

It is hydrophobic. The water can not get through the nonwoven surface. We call it water-repellent or waterproof at certain conditions.

High temperature resistant. As you know, the melting point of polyester nonwoven fabric is around 260°C. It dimensional stability during the high temperature conditions.

It has very good strength, excellent air permeability. And is anti-pull, anti-tear and anti-aging.

Polyester spunbond nonwoven which has a very special physical property is anti-gamma. Polypropylene does not have.

Because no additives during the production process. So, it is non-toxic to human skin.

Applications 🎉 For heat transfer printing

As you know, its property of high temperature resistant could do the heat transfer printing efficiently. The advantage maintains the stability of the shape, no colorfast, anti-aging and etc. It widely be used as the raw material of various nonwoven bags. Such like, various kinds of shopping bags, garbage bags. Outdoor billboard, street banner, calendar printing, various kinds of thents, table cover, curtain, envelop, gift bag, bookcover, wallcovering and etc...

Polyester spunbond nonwoven fabric to be widely used as various kinds of packaging materials. Such like, desiccant packaging, silica-gel drier, carbon abosorbents.

Polyester spunbond nonwoven fabric which has very good strength, excellent air permeability absorbs the moisture.
Home textiles

High tensile and bust strength, washable, durable physical properties to protect your down and feather products.

We have already been cooperating with feather and down products manufacturer which use our polyester spunbond nonwoven as the interlining for their down products.

Good performance for lamination and composite

Our lightweight between 10-30gsm spunbond nonwoven fabric which is the most competitive products in our factory.

Why is so popular?
Good strength
Excellent uniformity of the surface
High-temperature resistant
Anti-aging, anti-UV and gamma
Perfect air permeability
Eco-friendly
